

- I would spend the day making go carts and racing. Having ice cream and playing videogames.
- First I would let them choose a subject and let them learn but have fun at the same time.
- I would give them each laptops and and an hour of silent reading
- I would pick a subject and then I would learn and try to make it fun so time would fly by faster.
- Every class that i would have in normal day but just alot shorter like 15 minutes for each class.
- lunch for 2 hours, silent reading and have lots of labs in science. nothing else
- i would design an activity that is fun but also something that challenges his or her brain to see how much thier true potential they have but make it as fun and involved as possible
- I would take out the classes that are technical like information media and 21st century and leave Math, science, Social Studies, and Balanced Literacy longer. I would also plan in more field trips.
- Instead of having an English class, I would have a publishing company where students could write books and have them edited, then published.
- The first two hours of the day would be spent on art. For the art clase would be all about what you fell about life and people. The art room would fit only ten people at a time, thats because i need space when i draw or paint. The next hour would be a writing workshop. The writing workshop would be for different kind of writers. Also the workshop would have famos writers come in and talk about what help them write books. The two hours after thw writing workshop would be math. Most people

don't like math but its a big part of life so its a start to be ahead in math.

- First I would send the gifted kid to a math class. Then the gifted student would go to a science or social studies class. Then they would go to english class. Finally they would go to a gym or art class.
- i would let them have their disson in what they wanted to do but still have rules
- I'm going to base this on me so here goes. Since i'm a really good violin player i would have just about the morning practicing and the rest the regular subjects all one hour if you know what I mean about the wierd "hour" schedule.
- uuuuuuuuummmmmmmmmmmmmmm well it would depend on what gift they had. But for every gifted person i would make a morning class before school for physical gifted kids (like gymnastics or something like that)(like me)! and an after school class for mentally gifted kids (like physics and subjects like that!
- A day where you can do whatever you want. Like a bunch of stations would be set up for what you want to do when your older. If you didnt want to do that then you could just do whatever.
- Everybody would zip around the school on Segways. Everything would be futuristic. Not like the "fly to school" kind, but the school would be be more updated. More technology. And maybe some windows..
- School would start at 8:00 and each period would last 1 hour
  - 1st Period I would have Music to wake you up
  - 2nd period would be science with (sometimes explosive) labs every friday and modles every monday

3rd period would be Foreign language with fieldtrips to whatever country you were studying every month  
4th Social Studies that had a theme every month so that you could learn but still have fun, like if you were studying ancient Greece you would have a day as a god or goddess and see what it would be like  
Lunch with really healthy food but was still tasty and resses  
5th period Gym  
6th period and 7th reading  
sorry I have To go

- You would start school at around seven in the morning and have algebra at 7:05a.m. Then it would end at 9:00a.m. Next you'd have authors class where you publish one book on any topic every semester. That runs until 11:30a.m. Next is lunch. Then you have the same teacher for science and history classes. Then, whenever that ends, you have until 4p.m. to go and read in the library.
- I wish that there was only one big school so all of my friends at different schools would be there with me. I wouldn't have band right away in the morning because I am still tired and I would let CELL PHONES BE ALLOWED!!!!!!!!!!!!!!
- I'd say from 7:00-9:00 language(Spanish, French, German, Italian). From 9:00-11:00 gym. From 11:00-1:00 you can leave school grounds to go eat or hang out. From 1:00-2:30 science. From 2:30-3:00 math/pre-algebra/algebra. From 3:00-4:00 martial arts. School would end at 4:00 and you would have a cookie break every 15 minutes.
- For me, I would love to have music studies all day. Start with private lessons, have orchestra, ensemble

practice with my friends, and reading. I love playing violin. I also want to have lessons on all of the string instruments, especially viola, cello, and piano. but languages would be fun too. Also, I would want to be in a play, or musical as a musician, or an actor.

- I would have a day called gifted day. Since everybody's gifted in our school it would be for everybody. There would be a fundraiser for gifted kids family so that when gifted kids go on a field trip they will have enough money to pay for it all and it won't be cheap because we at our school treat our kids with great respect. The field trip would be to either Fun World or Stone Fire and I would rent out the place just for the kids to have a great time on that gifted day. Then the next year it will be a surprise and believe me there will be a surprise.
- I would design the school day like this: First and Second period would be dance. It would be varieties of dances, such as: tap, jazz, hip hop (ect.) Then for third and fourth period it would be acting class. We would make little shows and perform them for the school. For fifth hour it would be art class. We would make sculptures out of clay and beautiful paintings. Then, we would have lunch. There would be healthy choices such as Caesar salads and homemade spaghetti with meatballs. After lunch, we would have all of our core classes. (Math, Science, Language Arts, Social Studies.) That would be the perfect school day.
- well... first when I got to school I would go to any subject I wanted to (but of course have a list of the classes I could go to) art! I am very creative. then I would go to English because that's where I do my reading. then gym and just have fun!!!!!!! then French. then for lunch I would go somewhere close

to eat because lunch would last an hour and a half then id go to the rest of my classes all of them exciting! then i walk home.

- I would let there be a time for lunch and a time to talk to your friends. But that would only be part of the day. At lunch there would be a big variety of healthy things and unhealthy things to eat. I would make school more enjoyable so people would want to go to school. Then of course there would still be the school subjects. I would also let there be cell phones in class, and in the hallway.
- First of all, an all school breakfast and lunch. Second, would be free gym where all they have is equipment and you can do whatever you want. Then, each student would have a mini smart board instead of notebooks. Next, lunch would be steak, lobster, crawfish, and buffalo wings. Lastly, all teachers would be the most exiting fun award winning teachers.
- I think teachers should push kids a little but not too much. In first hour my teacher should lower her expectations for me to achieve. In second and third hour i have fun, laugh, but still learn and listen. i feel these hours are just perfect. in fourth hour i struggle a little in spanish. i try my best and thats what matters most. i think lunch should be longer. i feel like im rushing wen i eat. th rest of the day i feel like my teacher should put me in groups with the people at my level of knowledge.
- think i would put them in classes they should be in, not advanced social studies if they are in advacnced math. I would also make sure they werent doing everything on theyr'e own.
- Stay home.
- We could work on any projects that we need to do.

- Gifted kids should be challenged more in class. They should be able to interact with other kids and help them out. Gifted kids should be prepared for the future.
- I am not sure exactly. One difference from a normal school day could be that students could work at their own pace and move on at their own pace.
- They would have very challenging math problems as well as brain teasers. They would also be able to have an hour and a half to read and or study
- if i designed a school day for a gifted kid it would be..... a small group of kids in a classroom who are all more advanced in certain subjects than others. There reason i would design it this way is because it gives the gifted kid more capability to go further in there learning
- I would have adv. math or pre-algebra for him/her in the very beginning of the day. After that I would give him/her language arts/english. Then would be history. Then his/her short special class like gym, art or anything else like that. Then would be lunch(can't forget that!) Then would be the language he/she is taking. Any other classes he had chosen. Then science with many projects. Then the last bit of time left would be free for him/her to do something in the class.
- We should do all of are regular classes till 2:00 and then we should go to TAG for the rest of the day.
- I think the gifted kid should have the same classes like everyone else except instead of reading, we go to more appropriate classes. Like if they are reading at a 10th grade level, at least put them at a 8th grade level! The reason for that is that we're in school, we are supposed to be learning at our own pace. -

- I like going to classes. I like it the way it is. I would have more field trips.
- I would start by asking what they love to do in free time, have them have a little bit of fun in the beginning of the day doing their favorite hobby, then have them do some work. Afterwards, I would give them a lunch break with a slice of pizza, some fruit and a carton of milk to drink. For the afternoon, they would go to gym, a foreign language class, and then come back to homeroom for doing a project and finish the day with freetime.
- I would want it a normal day. I don't want any special attention.
- What I would do is take the lessons that would be for one day, and spread them evenly over the course of one week. The classes would be slower paced, and less note taking. I would put in videos and other objects pertaining to the lesson.
- I would have a separate class for TAG instead of missing some of a class.
